EDUCATION

BA Computer Science, University of Cambridge October 2023 - July 2026
Studied modules in Computer Architecture, Machine Learning, etc. Ranked **1/124** in Paper 6.
Dissertation: ”Simulating a RISC-V GPU” - Developing a C++ RISC-V software simulator for a GPU

WORK EXPERIENCE

Quantitative Developer Intern July 2026 - September 2026
Xantium *London, UK*

- Evaluating different ML model implementations to find ways to accelerate our model fitting and inference
- Developing a distributed task profiler to enable users to analyse the performance of their models on a cluster

Software Engineering Intern June 2025 - September 2025
Meta - Reality Labs, Horizon Scripting Team *London, UK*

- Worked on the C# scripting engine and ReactVR/TypeScript desktop editor which drives the creation of games for Horizon Worlds and over 5.6 million users
- Implemented TypeScript APIs for Editor Scripts which enabled users and a GenAI agent to control the game editor and wrote a compiler from CodeBlocks to TypeScript to help users migrate from legacy worlds

GPU Software Engineer Intern July 2024 - September 2024
Arm - Runtime Diagnostics Team *Cambridge, UK*

- Implemented memory allocation instrumentation to extend an existing memory tracking system in C/C++, consuming these producer events by reverse-engineering a memory visualisation tool which enabled us to optimise Mali GPU driver resource usage

Computer Science Subject Representative 2024 - 2025
St Catharine’s College Cambridge, University of Cambridge

Software Engineer July 2023 - December 2025
WJIK Technologies *Liverpool, UK*

- Creating games and websites with my brother and sister for fun and for people who have problems to be solved

PROJECTS

Neural Enhanced Text-to-3D Generation with 3D Gaussian Splatting October 2025 - December 2025

- Extending a SOTA Text-to-3D Generation ML model with a Neural Enhancer Network to improve the quality of the produced 3D model at lower Gaussian counts, reducing computational and memory cost

YENDOR - Langjam Gamejam 2025 - 1st Place Overall Winner December 2025

- Writing a custom language called nh using Bison and Emscripten to make a programming dungeon crawler game with a wasm runtime with OpenGL, garbage-collection and runtime type tagging

ACHIEVEMENTS & EXTRA-CURRICULAR

- **Winner of the Cambridge Championship Branch Prediction 2026**, University of Cambridge 2026
- **Winner of Best Real-World Integration**, Cambridge Game Jam 2026 - Relic Rivals March 2026

TECHNICAL SKILLS

Interests	Graphics Programming, Machine Learning, Compiler Development, GPU Programming, Game Development, Computer Architecture
Languages	C, C++, C#, Python, Java, OCaML, GLSL, SQL, JavaScript, TypeScript
Developer Tools	Git, Jira, Jenkins, React VR, Bison, Emscripten, OpenGL
